

ALEX RIVERA

San Francisco, CA | (555) 012-3456 | alex.rivera.ai@email.com | linkedin.com/in/alex-rivera-ai | github.com/arivera-dev

PROFESSIONAL SUMMARY

Results-oriented AI/ML Software Engineer with 5+ years of experience in designing, developing, and deploying large-scale machine learning models and data pipelines. Expert in deep learning, natural language processing, and MLOps. Proven track record of optimizing model performance and integrating AI solutions into production environments to drive business value.

TECHNICAL SKILLS

Languages: Python (Expert), SQL, C++, Java, Bash
Frameworks: PyTorch, TensorFlow, Scikit-learn, HuggingFace, Keras, JAX
Tools/MLOps: Docker, Kubernetes, AWS (SageMaker, EC2), MLflow, DVC, Git, Jenkins
Data: Pandas, NumPy, Spark, Kafka, PostgreSQL, MongoDB, Pinecone (Vector DB)

PROFESSIONAL EXPERIENCE

Senior Machine Learning Engineer | TechNova Solutions

Jan 2021 – Present | San Francisco, CA

- Lead the development of a production-level RAG (Retrieval-Augmented Generation) pipeline using LLMs, improving query accuracy by 40%.
- Architected and deployed a computer vision model for real-time defect detection, reducing manual inspection costs by \$200k annually.
- Implemented automated model retraining pipelines using MLflow and Kubeflow, reducing deployment time from weeks to hours.
- Optimized inference latency by 60% through model quantization and pruning techniques for mobile edge deployment.

AI Software Engineer | DataStream Systems

June 2018 – Dec 2020 | Austin, TX

- Developed predictive maintenance models using LSTM networks, achieving 92% precision in predicting hardware failures.
- Designed and maintained scalable ETL pipelines processing 5TB+ of daily telemetry data using Apache Spark.
- Collaborated with cross-functional teams to integrate recommendation engines into the core product, increasing user engagement by 15%.
- Mentored junior engineers on best practices for Python development and reproducible ML experimentation.

PROJECTS

OpenSource-GPT Wrapper: Developed a lightweight Python wrapper for local LLM orchestration, gaining 500+ stars on GitHub.

Autonomous Drone Navigation: Built a reinforcement learning environment to train drones for indoor obstacle avoidance using PyTorch and AirSim.

EDUCATION

M.S. in Computer Science (Specialization in Machine Learning)

University of Texas at Austin

B.S. in Software Engineering

Georgia Institute of Technology
